Lavender plantation and essential oil production

A preliminary marketing study of the world market of lavender and its derivatives indicates the presence of a trend of steady growth in demand for this crop. The main area of use of lavender is the production of the eponymous essential oil, which is widely used in the cosmetic, pharmacological and food industries. Global demand for lavender oil is increasing by more than 6% per year and is projected to exceed US \$ 124 million by 2024.

INVESTMENT OFFER

Processing and packaging of legumes

Agriculture is one of the leading and largest sectors Uzbekistan contributing to national economy. Another direction is to increase the share in the export of legumes by expanding the range of products. Annually Uzbekistan exports about 200 thousand tons of wheat. Afghanistan and Iran have been the only sales markets for several years. Currently, the cost of Uzbek wheat is 170-\$ 180 / t on terms of delivery to the points of departure, while the price of legumes (mung bean, chickpeas and beans) fluctuates in the range of 500-\$ 800 / t depending on the product.
