

## Production of environmentally friendly bacterial fertilizers

Bacterial fertilizers are a type of fertilizer preparations that contain soil microorganisms useful for agricultural plants. When these fertilizers are applied in the soil, biochemical processes are enhanced and the root nutrition of plants is improved.

Capacity: 90 tons

Project Cost : \$ 5 million.

Need for investment : \$ 3.5 million.

IRR: 20%

NPV: \$ 1 million

PP:39 months

Location: Tashkent
